Allowable Subject Matter

Claims 1- 12 are allowed.

The following is a statement of reasons for indication of allowable subject matter. The prior art fails to teach or suggest the limitations of a method or system that graphically illustrates the investment risk of a portfolio via a component of expression $(X_m - X_b)$, wherein:

determining for said portfolio by using properties of said class a solution to $(X_m - X_b) = [(E_S - X_b) \cdot \alpha] + [(E_P - X_b) \cdot \gamma] = I'_S + I'_P$ with $I'_S = [(E_S - X_b) \cdot \alpha]$ and $I'_P = [(E_P - X_b) \cdot \gamma]$, wherein $(E_S - X_b)$ is a component of $(X_m - X_b)$ and I'_S representing an Expected Shortfall, $(E_P - X_b)$ is a component of $(X_m - X_b)$ and I'_P representing an Expected Profit, γ is a component of $(X_m - X_b)$ and I'_P representing a probability of profit, α is a component of $(X_m - X_b)$ and I'_S representing a probability of loss, I'_S is a component of $(X_m - X_b)$ representing an insurance against an Expected Shortfall and I'_P is a component of $(X_m - X_b)$ representing an insurance against an Expected Profit;

(as claimed in Claims 1 and 7).

Such a limitation is present in all independent claims.

It is old and well known in the art to create topographical maps or three-dimensional models of physical objects. However, such creations traditionally reconstitute places or items that otherwise exist within the physical word. For example, a topographical map is a recreation of a geographical region in a smaller scale, allowing a viewer to more easily examine the characteristics of the geographic region.

Furthermore, it is also old and well known in the art to analyze an investment portfolio and scrutinize the benchmarks and metrics that are indicative of that portfolio's performance, including the risk involved in said portfolio's potential future performance.

The instant application distinguishes from these old and well known practices by communicating the analysis of the investment portfolio through a topographical map. Examiner asserts that this differs from conventional and standard practices, as the Applicant is creating a topographical map of a non-physical and non-tangible item. The Applicant is creating a topographical map based upon an abstract and theoretical concept - investment risk. Furthermore, the investment risk communicated via the topographical map is narrowly defined by the Applicant in the equations incorporated into the claims.

Michaud (US Patent 6,003,018) discloses a method/system for analyzing a portfolio for risk (expected return and expected standard deviation of return) and communicating its analysis via mapping an efficient frontier (see abstract). Neither this patent, alone nor in combination with others, discloses nor suggests the feature of creating a topographical map to communicate investment risk data nor utilizing the specific equations claimed by the Applicant to derive said investment risk data.

Hallerbach (Hallerbach, Winfried & Spronk, Jaap. A Multidimensional Framework for Financial-Economic Decisions. Journal of Multi-Criteria Decision Analysis. May/June 2002. Vol. 11. Issu. 3. pp. 111-124) discloses a method/system for analyzing a portfolio for risk (see 5.3, p. 118) and communicating its analysis through a financial model. The financial model is only discussed in the most general sense. Neither this non-patent literature, alone nor in combination with others, discloses nor suggests the feature of creating a topographical map to communicate investment risk data nor utilizing the specific equations claimed by the Applicant to derive said investment risk data.
